

THOTA SAI ESWAR SRINATH

Computer Science Student & Founder — GoFocusGen | Bengaluru, India

tsrinath2020@gmail.com | srinathdev.vercel.app | github.com/tsrinath2007 | linkedin.com/in/tses

SUMMARY

CS student and founder building applied, real-world software rather than demo-ware — spanning startup product development, AI/ML pipelines, and full-stack engineering. Proven hackathon track record shipping production-deployed projects across gamified ed-tech, spacecraft telemetry monitoring, and IoT edge systems.

EXPERIENCE

Founder — GoFocusGen

May 2026 – Present

Self-founded startup · Bengaluru, India

- Founded and built a gamified study-productivity platform mapping study session durations to real domestic flight routes, using Next.js, Mapbox GL JS, and Framer Motion for interactive route visualization across India.
- Designed and shipped a coin/streak gamification economy, an AI-powered study plan generator, Google OAuth, and a real-time multiplayer "Co-Pilots Lounge" feature.
- Owned end-to-end product: UI/UX design (dark/gold premium aesthetic), deployment on Vercel, and go-to-market — including Google Search Console setup/indexing, LinkedIn Company Page launch, and social marketing creative.
- Won 1st Place (Aviation Innovation) at Manipal Aero-Hack 2024 for the core concept.

SELECTED PROJECTS

AstroCopilot — AI Mission Copilot for Spacecraft Life Support

Apr 2026

Scaler OpenEnv Hackathon · Top 1000, Round 1 Qualifier (AI Living for India)

- Built an AI copilot monitoring spacecraft ECLSS telemetry (oxygen, CO2, pressure, power) to predict failures before alarms trigger, framed around ISRO's Gaganyaan program.
- Implemented a PPO reinforcement-learning agent for autonomous adjustments and a fine-tuned Qwen2.5 model for structured anomaly explanations.
- Streamed live telemetry via WebSockets with sub-250ms latency for LLM-generated anomaly resolution advice; modeled 12 spacecraft parameters.

PULSE RAIL — Railway Track Health Monitor

May 2026 – Present

Zuup Hackathon

- Built an edge-computing prototype using accelerometers and on-node Wavelet Packet Transform to detect rail vibration anomalies in real time.
- Built a simulation dashboard visualizing track decay hotspots and stress heatmaps, with simulated integration into India's Kavach anti-collision beacon system.

Life Support ENV — ECLSS Habitat Simulation Sandbox

Jun 2026

Samsung Solve for Tomorrow · Top 10 Finalist (Round 2)

- Fine-tuned Qwen2.5-1.5B with a custom LoRA adapter on 1,200+ pages of NASA life-support reports to optimize oxygen loops and water scrubbers.
- Simulated system failures (leaks, blockages, filter decay) and trained a PPO RL model to recover optimal system ranges; hosted a public Gradio app on HuggingFace Spaces.

Loop — Passive Workflow Automation Detector

Aug 2026

Hackverse 2.0

- Built an AI-powered desktop tool that passively observes user behavior patterns and suggests workflow automations without explicit user input.

EDUCATION

Manipal Academy of Higher Education (MAHE), Bengaluru — B.Tech, Computer Science

2025 – 2029

CGPA: 7.25

Turito, Hyderabad — Senior Secondary (XII)

93%

The Athena School, Kurnool — Secondary (X)

75%

SKILLS

Languages: Python, Java, C

Approach: AI-assisted / vibe coding — rapid prototyping and shipping with AI coding tools

Currently Learning: Machine Learning & AI, with a growing interest in building AI applications
